

# QuickBooks integration

online & desktop

## **Eliminate manual entries and save 15 to 20 hours per month by integrating Ekos and QuickBooks**

The QuickBooks Online and Desktop integration with Ekos takes your financials to the next level by creating automated accounting processes. This integration will minimize double-entry errors, streamline departmental communication, and collect compliance data — all in one place.

Ekos syncs all your sales data to your QuickBooks Online or Desktop account, from ordering inventory to creating invoices. Instead of your accountant or bookkeeper having to add those in manually after your sales team puts them into Ekos, your information will be automatically synced.

In addition to syncing with the data you're already adding to Ekos, real-time inventory cost accounting provides a transparent look into what it costs to make each product so you can price your items appropriately and focus on profit.

One of the biggest benefits of the QuickBooks Online and Desktop integration with Ekos is the ability to save time while filing taxes. Custom reports in Ekos allow you to easily pull the data needed for the TTB and other compliance requirements, giving you all the info you need to file your taxes.

### key benefits\_

- Reduce double-entry accounting
- Streamline communication between departments
- Easily view real-time financial data
- Know true cost of products
- Sync invoices and orders directly to QuickBooks Online and Desktop
- Collect compliance data for tax reporting
- Scale your business with all your data living in one place
