

Arrayed integration

Free up time so you can focus on growing your business

With the Arrayed integration for Ekos, you can eliminate manual processes and duplicate entries while gaining complete visibility into key metrics that help you focus on growing your business. Ekos integrates with Arrayed as well as with QuickBooks Online, QuickBooks Desktop, and Xero so you can run your business seamlessly by reducing manual bookkeeping of POS and ecommerce transactions with your accounting system.

When you integrate Ekos with Arrayed and your accounting software, you no longer need to pull manual sales reports to deplete inventory and create journal entries. Instead, you can automatically send your end-of-business-day sales transactions from Arrayed to Ekos. Ekos immediately depletes your packaged product and merchandise inventory so you can plan future production and accurately allocate inventory to your taproom or tasting room and your online store. Ekos also automatically posts the invoice for daily sales and a daily journal entry to maintain up-to-date Cost of Goods Sold, tips owed to your employees, taxes owed, discounts given in the taproom, payments received from customers, and refunds given during the day.

key benefits_

- Save 2+ hours per week by eliminating manual reconciliation
- Automate taproom/tasting room and ecommerce inventory depletion, and journal entry creation
- Gain better business visibility with real-time tracking of tax-paid inventory

“Previously, I spent so much time trying to make three things – inventory, POS and accounting – talk to each other and it was a nightmare. [The Arrayed integration] is a great timesaver, is way more efficient, and reduces inaccuracies in data.”

- Brian Stephan,
co-founder of Iowa Brewing Co.
